

The JOOMLA 1.5 All weblinks Plugin

Introduction

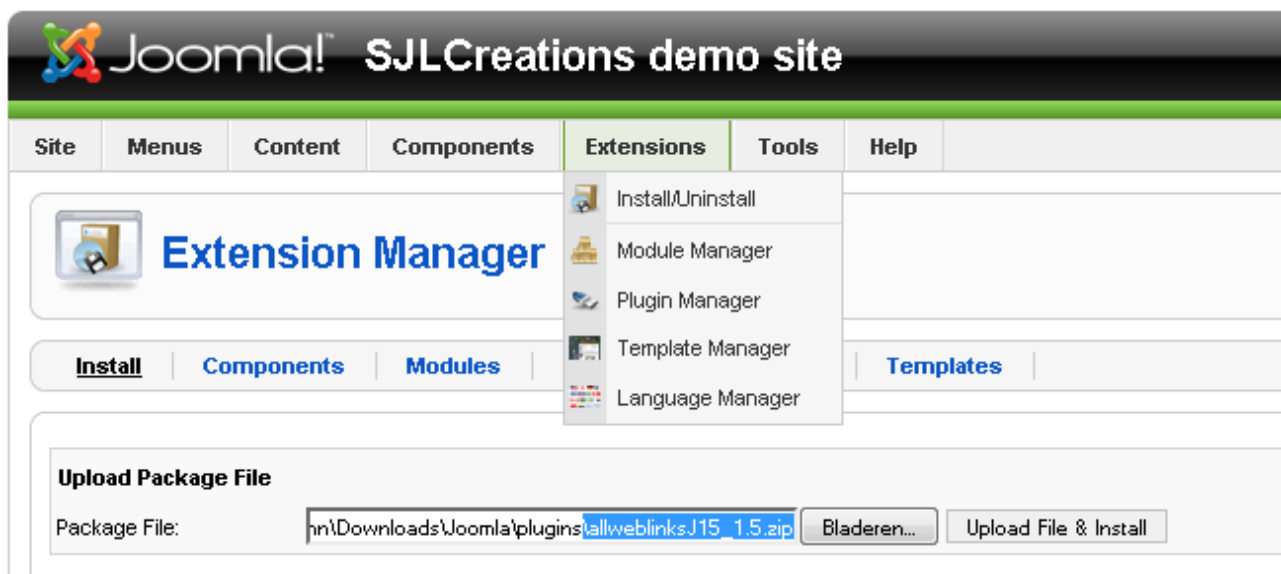

With my PLUGIN you should still use the weblinks component to manage your weblinks. But the plugin shows ALL weblinks in one page in columns or rowwise with the description of the weblink as title, if no description is filled in it shows the weblink name as description

You can specify the following:

- * Specify welcome text
- * Show new links (with how many days)
- * Show hits
- * Open ALL links in new window
- * length of the title
- * Cut-of Length

Installation

Goto the installation menu (Extensions --> install / uninstall)

Select the latest version of the plugging you downloaded en click on (Upload File & Install) after successfull installation

Allweblinks 1.5 - for Joomla! 1.5.x

The way to show of your weblinks

You have just installed Allweblinks, the versatile plugin to show your weblinks for Joomla!-powered sites.

All Weblinks can show your weblinks on various ways in you document position.

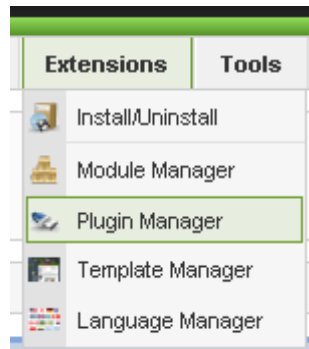

Minimum Syntax: {all_weblinks}categories to show{/all_weblinks}

Extendend Syntax: {all_weblinks show_hits=[1] show_new=[1] new_window=[1] show_description=[1]}categories to show{/all_weblinks}
Specify nothing for all categories and 2,5,6 to show some categories.

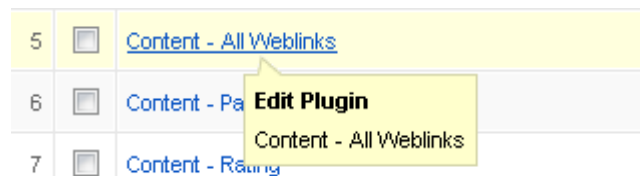

Currently there are 6 parameters to use in the call

1. show_hits
2. show_new

go to Extensions --. Plugin Manager

Click on the Plugin to set the Defaults

Enable the plugin

Name:	Content - All Weblinks
Enabled:	<input checked="" type="radio"/> No <input type="radio"/> Yes
Type:	content
Plugin File:	all_weblinks.php

Click on Yes and Apply or Save

Configuration

You can set the Deafaults in the plugin configuration

Parameters

▼ Plugin Parameters	
Show new	<input checked="" type="radio"/> No <input type="radio"/> Yes
Number of days link is new	<input type="text" value="3"/>
Text to show on new links	<input type="text" value="*"/>
<hr/>	
Link Sort order	Date DESC ▼
Category Sort order	Category ID ▼
Show hits	<input checked="" type="radio"/> No <input type="radio"/> Yes
always open in new window	<input type="radio"/> No <input checked="" type="radio"/> Yes
<hr/>	
Length of title	<input type="text" value="23"/>
Length to cut off	<input type="text" value="20"/>
<hr/>	
Module Class Suffix	<input type="text"/>

Or use parameters in the Call to the plugin

e.g. `{all_weblinks show_header=[0]}36{/all_weblinks}` gives the links for category 36 and suppresses the category header...

How to show the links

To show all weblinks in one page create a Content Item / Article

put at least the syntax

`{all_weblinks}{/all_weblinks}`

to show all categories on 1 page

you can also specify the categories to show by putting them between the brackets

`{all_weblinks}4,7{/all_weblinks}`

This will show only the categories 4 and 7

Next, create a menu item and select to show the Article you created

The parameters in the call to the plugin

Extended Syntax: `{all_weblinks show_hits=[1] show_new=[1] new_window=[1] show_description=[1]}categories to show{/all_weblinks}`

Specify nothing for all categories and 2,5,6 to show some categories.

Currently there are 6 parameters to use in the call

1. show hits
2. show_new

3. new_window
4. show_header
5. moduleclass_sfx
6. show_description

The call is like this `{all_weblinks show_new=[1]}1{/all_weblinks}` gives the links for category 1 and enhances the new ones...

For the `moduleclass_sfx` you can specify `_col`, `_blocks` or something you put in, look at the samples on the website for the layout

You must put these parameters after the first **{all_weblinks**

e.g. `{all_weblinks moduleclass_sfx=[_col]}`

The Plugin can be called multiple times Samples

`{all_weblinks}{/all_weblinks}` shows all categories:

Joomla! Specifieke Links

MySQL	php.net	Joomla!
DutchJoomla!	OpenSourceMatters	Joomla! - Fora
DutchJoomla! - Fora	Ohloh Tracking of Jo...	

SJL Creations

SJL Creations	Hoeve Weltevre	Natuur en Wetenschap
-------------------------------	--------------------------------	--------------------------------------

`{all_weblinks moduleclass_sfx=[_blocks]}19,36{/all_weblinks}` gives the links for categorie 19 and 36 in `_blocks` format :

SJL Creations
SJL Creations
Hoeve Weltevre
Natuur en Wetenschap

{all_weblinks moduleclass_sfx=[_col]} 19,36{/all_weblinks} gives the links for categories 19 and 36 in _col format:

SJL Creations
[SJL Creations](#)
[Hoeve Weltevrete](#)
[Natuur en Wetenschap](#)

Also you can add parameters to your call to override the settings of the plugin.

Currently there are 4 possibilities {show_hits, show_new en new_window,show_header}

{all_weblinks show_header=[0]} 36{/all_weblinks} gives the links for categorie 36 and suppresses the categorie header...

[SJL Creations](#) [Hoeve Weltevrete](#) [Natuur en Wetenschap](#)

{all_weblinks show_description=[0]} 36{/all_weblinks} gives the links for categorie 36 and shows de description below the link...
